

# Take control of your '4<sup>th</sup> Utility'

with Interact's Property-wide Managed Internet and TV Platform

We are living in unprecedented times, and the way we live and work is undergoing an extraordinary shift. As the Multi-Family Industry works to differentiate themselves in a competitive market, the consistency, speed, and the quality of digital services have become a critical factor in capturing and retaining residents.

At the core of our solution is the **Interact Platform**, a unique combination of technologies that enables the distribution of cost-effective, property-wide, high speed Internet access, digital media programming and Internet of Things (IoT) integration.

We do it all for you by provisioning a private network for each resident and installing servers and networking equipment to create the property's '4th utility', a wired and wireless Internet infrastructure utilizing the property's existing copper wiring infrastructure.

Our streaming TV service allows residents to use our telev8 App on their preferred streaming device. (See back for details)

## Interact Incorporates:

telev8™

- › **Linear television and on-demand video content** - affordable, easy to use, easy to implement, and support via our telev8 app
- › **Property-wide, Managed, Gigabit+ Internet** - symmetrical upstream and downstream bandwidth, unlike traditional cable companies
- › **IoT** - managed for both, owners and residents
- › **Most importantly - fast, secure, and compliant services** for your residents to use

| Technology                                                                                                                      |                                                                                                         | Services                                                                                                                          |                                                                                                                           | Multi-Family Owner                                                                                                               |                                                                                                                                    | End User / Resident                                                                                                                 |                                                                                                                                 |

## Residents Benefits:

- › **Instant ON!** Residents easily self-install all services within a matter of minutes
- › Connected devices include residents' streaming devices (i.e., Apple TV, Amazon 4K Fire Stick), smart phones, tablets, smart TVs and laptops
- › Access to the network for additional **IoT devices** such as thermostats, door locks, voice control devices (such as Amazon Alexa and Google Home), speakers, security cameras, hue lighting, refrigerators, etc.
- › No interference from surrounding neighbors' Wi-Fi devices
- › Seamless Internet roaming throughout the property - using a single property ID (SSID) and secure unique password
- › Cellular off-load via Wi-Fi within and around the property
- › Up to Gigabit+ Internet - residents have the option to purchase the bandwidth package that best meets their needs
- › **More economical television offering** - skinny bundles to provide local programming, sports, and desired cable channels with the ability to subscribe to additional packages and a-la-carte offerings
- › 72-hour catch-up TV and cloud DVR service
- › Parental control with 'white listing' services

## Owner Benefits:

- › Improve the Internet experience for residents by providing reduced congestion and radio frequency (RF) interference
- › Utilize existing wiring to provide symmetrical Gigabit+ Internet bandwidth - no need to rewire
- › **Wi-Fi Security** - secure, private network for owners, residents and guests anywhere on property
- › Supports existing coaxial, unshielded twisted pair (UTP) and/or fiber infrastructure
- › **Cost-effective amenity** that can be provided at a lower cost than what can be obtained by the individual resident from existing service providers
- › Full Wi-Fi 6e compliant / cellular traffic off-load - utilizing Interact's Property-wide managed Wi-Fi network, instead of implementing costly, outdated distributed antenna systems (DAS)
- › Additional value-added amenities that can differentiate the property and provide incremental revenue, such as insurance discounts and energy rebates
- › **Manage IoT building management technologies**, such as predictive maintenance sensors, live and stored security camera footage, CO2, smoke and noise sensors, water leak, thermostats, and energy management devices
- › World Class Partnerships with TiVo, Best Buy Business and Lumen (to name a few)
